

STANDARD FCI

Spirtes, Glymour, and Scheines (2000), pp. 144-145

1 Adjacency search and separating sets

2 Orient unshielded colliders

3 **Refine with Possible-D-SEP**

4 **Reset retained endpoint marks**

5 Reorient unshielded colliders

6 Apply the original orientation closure

FCI+

Claassen, Mooij, and Heskes (2013), Algorithm 2

1 Degree-bounded adjacency search

2 Build the augmented skeleton

3 **Detect candidate D-SEP links**

4 **Construct and test separator hierarchies**

5 Remove, rebuild, and revisit candidates

6 Apply complete final PAG orientation

Shared target: an observational equivalence-class representation; neither workflow identifies a unique DAG or a treatment effect.
